## DETAILED ACTION

### *Drawings*

1. The drawings submitted have been reviewed and determined to facilitate understanding of the invention. The drawings are accepted as submitted.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent No 6,324,330 to Stites.
4. Stites describes an optical member for gathering light having a body (110a-c) with an incident face (120), a first reflecting surface (110Ea), a second reflecting surface (110Fb<sub>1</sub>) and an emergent surface (140), where light enters the body from the incident surface, forms a total reflection through the reflecting surfaces and passes through the emergent surface (see Figures 5-14 and Columns 1-8).
5. Stites does not describe the member used in a plane image input device. However, it has been held that a recitation with respect to the manner in which a claimed device is intended to be employed does not differentiate the claimed device from a prior art device satisfying the claimed structural limitations. Ex parte Masham, 2 USPQ 2d 1647 (1987).
6. Stites further describes the reflecting surfaces connected at about 90 degrees (see Figure 5).
